Naetirat Songsomboon (Nae)

naetirat.s@gmail.com | linkedin.com/in/naetirat-songsomboon

Master's student in Computer Science at TU/e with software engineering experience in the data analytics industry, building data pipelines and user-facing web applications end to end, from requirements gathering to production release. Specializes in software architecture with high cohesion and low coupling. Passionate about building high-quality software that balances long-term maintainability, healthy stakeholder collaboration, and on-time delivery.

Education

Master's Degree in Computer Science and Engineering, Netherlands | September 2025 - Present
Eindhoven University of Technology (TU/e)

- **Expected graduation:** June 2028
- **Relevant coursework:** Software Evolution, Architecture of Distributed Systems, Engineering Data-Intensive Systems, Software Engineering for AI

Technical Skills

- **Programming Languages:** TypeScript, JavaScript, Go, Python
- **Frameworks:** Next.js, Fastify, Fiber
- **Databases & Storage:** MongoDB, MySQL, Google BigQuery, Redis, AWS S3
- **Message Queuing:** RabbitMQ, AWS SQS
- **Cloud & DevOps:** Git, Docker, Kubernetes, GitHub Actions, ArgoCD, Grafana, AWS (Lambda, API Gateway, SAM, EKS, Amplify)
- **Software Architecture:** Clean Architecture, Modular Monolith, Microservices, Serverless

Work Experience

Senior Software Engineer, Wisesight (Thailand) Co., Ltd., Thailand | Jan 2023 - Aug 2025

- Developed and maintained two data analytics products end to end in a peer team of 3 senior engineers, from gathering requirements to system design, full-stack development, testing, production deployment (GitOps, IaC), and operations.
    - A B2C social-media trend analytics web application serving 30k+ users, built with Next.js (React, TypeScript) on AWS Amplify, TypeScript (Fastify) APIs on AWS Lambda and API Gateway, and IaC on AWS SAM.
    - A B2B influencer discovery product consuming 1M+ social-media messages/day, built with Next.js and Go (Fiber) on Kubernetes with GitOps.
- Led the team to restructure both codebases for high cohesion and low coupling, allowing engineers to identify the scope of a change and implement components in parallel with minimal merge conflicts.
- Enabled on-demand AI trend summarization beyond AWS Lambda's response limit by designing an asynchronous request-reply flow that computes only what users request.
- Facilitated team activities such as sprint planning, sprint reviews, feature design sessions, and monthly team health checks.

Software Engineer, Wisesight (Thailand) Co., Ltd., Thailand | Jan 2023 - Aug 2025

- Developed a social-media data pipeline collecting 1M+ messages/day from major social-media platforms and multiple websites, normalizing the messages into one central format, storing them in MongoDB and BigQuery, and publishing them over RabbitMQ to consuming teams.
- Enabled on-time data collection within social-media platform rate limits by developing a tiering system for 300,000+ data sources, based on criteria such as follower count and posting frequency.
- Designed and built the pipeline's image-analysis stage (OCR and object detection) on a copy of each message, so message text reached downstream teams without waiting for image analysis, with each message's images processed in parallel and re-hosted on S3 before their source URLs expired.
- Shortened onboarding for 3 new engineers by writing documentation for each social-media platform, giving the team a quick reference for platform details without going through the whole codebase.

Languages proficiency

Thai Native
English Professional working proficiency (C1)
Dutch Elementary (A1)
